GDPR ENFORCEMENT TRACKER

Eight years of GDPR fines

Fines issued across the EU & EEA since the regulation took effect in 2018 — how often regulators acted, what they penalised, and how much it added up to.

2018 – 2026

In 2023

960
TOP VIOLATION TYPE
Legal basis failures

Enforcement over time

Number of fines — Total value (€B)

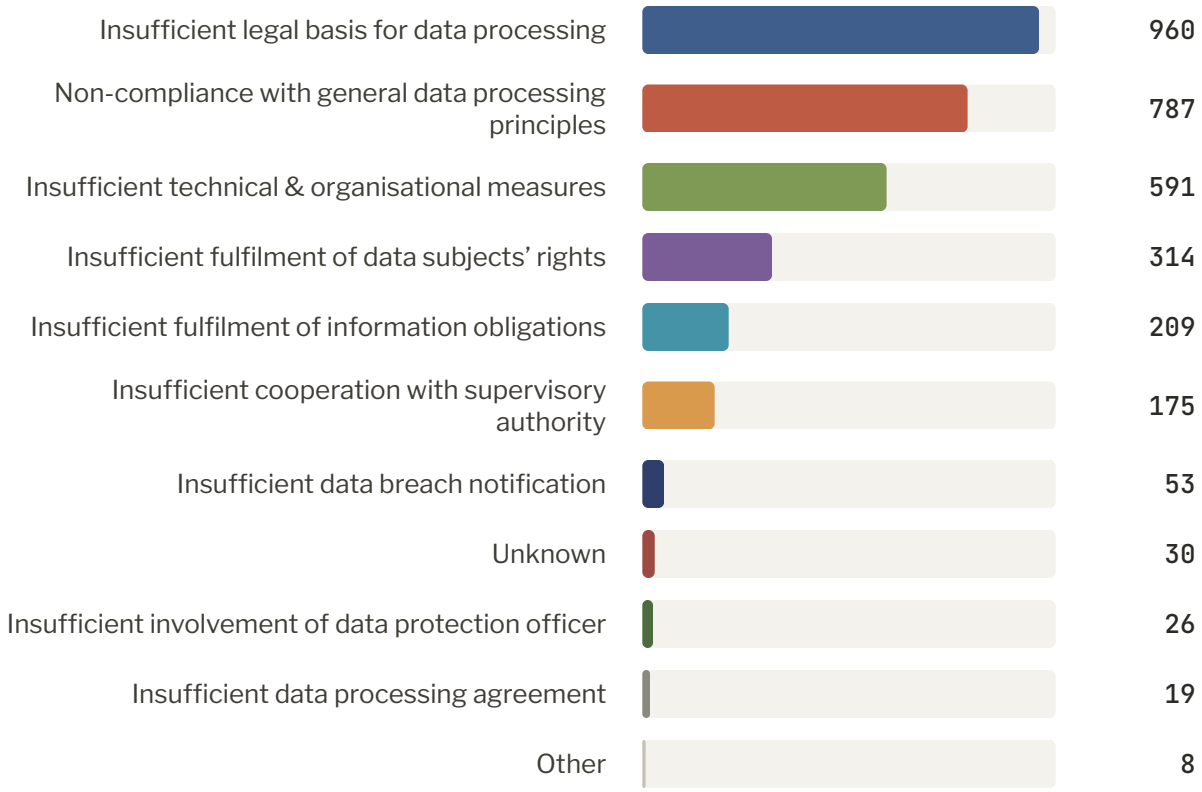

Volume climbed to a 2022 peak, while the total monetary value spiked a year later in 2023 on the back of a few very large penalties.

Hatched 2026 bar covers January–June only

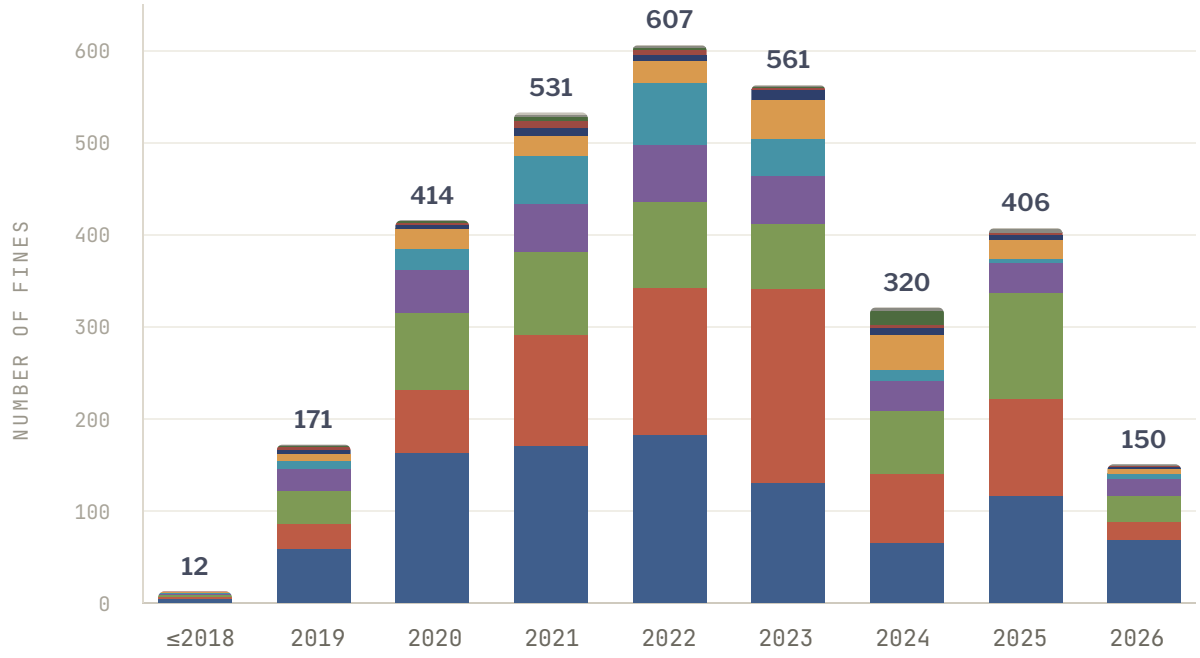

What gets penalised

Every fine, grouped by the violation behind it. Three causes — legal basis, core processing principles, and security measures — account for the large majority.

Composition by year

The same fines, split by violation type within each year — showing how the mix of enforcement priorities shifted over time.

Insufficient legal basis for data processing
Non-compliance with general data processing principles
Insufficient technical & organisational measures
Insufficient fulfilment of data subjects' rights
Insufficient fulfilment of information obligations
Insufficient cooperation with supervisory authority
Insufficient data breach notification
Unknown
Insufficient involvement of data protection officer
Insufficient data processing agreement
